

EGG_Turning_2022/05/01_Version1_E

The Eggersmann Philosophy

As an active contributor to the recycling industry, we support the global fight for the environment and climate protection - with our systems and special machines as well as with many years of experience and well-founded know-how and passion.

We have made it our task to recycle all kinds of waste as high quality as possible.

With our special machines and systems, we separate as many recyclables as possible from the material before it is incinerated or landfilled. Landfill masses are thereby highly reduced, which in turn significantly reduces CO₂ emissions and fewer pollutants and microplastics enter the environment.

In our own biological waste treatment plants, we generate renewable energy from biomass, thereby saving greenhouse gases and fossil fuels. At the same time, we produce quality fertilizers for agriculture. In contrast to soil-damaging mineral fertilizers with high nitrate levels, this natural soil improver supplies the soil with rich humus. We process around 170,000 tons of biomass every year into quality compost / fertilizer and thus contribute, among other things, to sustainable, organic food production.

Portable and stationary recycling machines by Eggersmann are the first choice for efficient and user-friendly turning, screening and shredding with the lowest operating costs and maximum reliability.

All of our machines are characterized by numerous future-oriented features such as Eggersmann **NRT** Noise Reduction Technology, a setup specially tailored to the machine for reducing the noise level.

Other highlights of our machine technology are the Eggersmann Service Features **MMS** Minimum Maintenance System (longest maintenance intervals and minimized maintenance effort for maximum machine uptime) or the remote maintenance tool Eggersmann Telematics System. Among other things, the latest Stage V engines and the Eggersmann **ASC** Auto Standby Control, the automatic standby function of the machine, ensure better sustainability and lowest fuel consumption.

BACKHUS turners

BACKHUS windrow turners from Eggersmann have been known worldwide for more than 30 years and stands for quality and the best process results for every application - from biological drying and the treatment of contaminated soils to the production of quality compost.

BACKHUS windrow turners can be expanded with a variety of options so that there is a suitable solution for every application. In addition, these machines are available in all common working widths. In this way, Eggersmann provides a suitable solution for garden and landscape contractors as well as for customers with the largest quantities of material and, overall, the widest product range on the market.

As EcoEngineers, we can support you with our many years of experience in the development of individual solutions for you, and we can optimise the machine and process to suit your needs.

BACKHUS A 30

The **BACKHUS A 30** compost turner impresses with its robust and compact design and is easy to handle thanks to its intuitive operation.

The machine, specifically developed for moving triangular windrows, is self-propelled so that no additional tractor or tow tractor is required. Compared to the tractor-drawn compost turner, more material can be processed on the same area, as the windrows can lie „foot-to-foot“. The compact rubber track undercarriage ensures the best driving characteristics, while the automatic ground contour adjustment of the track clearers gives the windrow turner particular agility. In addition, the track clearers allow the compost windrows to be set up foot by foot, resulting in optimum land utilisation.

The rotor of the compost turner is height-adjustable, fully reversible and its rotational speed is continuously variable. The machine is very easy to maintain and is also characterised by its low downtimes.

The **BACKHUS A 30** windrow turner features fuel-efficient diesel technology. The installed diesel engine complies with the current EU Stage V / EPA Tier 4f emissions standard.

BACKHUS A 38

The **BACKHUS A 38** triangular windrow turner is the latest newcomer to the BACKHUS family and is a further development and replacement for the **BACKHUS A 36**.

Whether for green waste composting or the treatment of contaminated soils, the **BACKHUS A 38** achieves maximum output in a wide variety of applications. Like all BACKHUS A series models, the machine is equipped with a Cummins engine to EU Tier V emission standard, but can also be supplied with an EU Level II or an EU Level III A engine when required.

BACKHUS currently offers three tracked versions for its windrow turners to give the best possible match to the ground. In most cases, rubber pads are selected for asphalt or concrete surfaces. A double grouser steel shoe is used for unpaved ground. The steel shoe has less wear, while the rubber pad version is easier to change and thus more cost-effective.

BACKHUS A 45

The **BACKHUS A 45** turner can be used for the composting of agricultural waste, organic waste or sewage sludge. The turner has a windrow width of 4.5 m and a windrow height of up to 2.3 m, allowing it to reach a turning capacity of up to 3,000 m³ per hour, depending on the material.

The **BACKHUS A 45** has a comprehensive range of standard equipment. The generously proportioned cab of the turner enjoys good access and includes a modern LED touchscreen display, an air-sprung fabric seat and a joystick for practical single-handed operation. In addition to the simple and ergonomic operation the machine also benefits from straight-forward access to relevant maintenance and inspection components.

The potential to adapt the **BACKHUS A 45** to individual requirements makes it the perfect multi-purpose machine for every plant operator. For example, the optional side shifter ensures effective use of space, and a fleece winder facilitates improvement of the composting process. The optional irrigation unit also has a positive impact on the composting process.

BACKHUS A 50 / A 55

The **BACKHUS A 50** and **A 55** compost turners are suitable for processing a vast range of different materials and are in operation right around the globe. The windrow turners are used for the composting of green and organic goods, sewage sludge, waste from sugar cane and palm oil production and other feed stocks, as well as for soil decontamination. They are also used in earthworks or for industrial mixing of substrates. In addition, the **BACKHUS** series of turners run in almost all types of climates, due to their mature and robust design.

With windrow widths of 5.0 to 5.8 metres and a height of 2.5 metres, throughputs of up to 4,500 m³ per hour can be achieved.

In addition, **BACKHUS** turners are designed to ensure easy access to all components, therefore facilitating uncomplicated maintenance and cleaning. The chassis of the **A 50** and **A 55**, for example, is also designed as an open structure, so that material getting into the chassis frame immediately falls out again. When the material is discharged, the windrow is set up again at the same time.

BACKHUS A 60 / A 65

With an operating width of 6.0 m to 6.8 m and a superlative hourly throughput capacity of up to 5,500 m³, the **BACKHUS A 60** and **A 65** turners are also suitable for very large volumes of material. Nonetheless, fuel consumption is still low.

With their compact operating and transport dimensions, **BACKHUS** turners are suitable for flexible operation anywhere on the plant and further afield. Furthermore, the access points, designed for easy maintenance and cleaning of all relevant machine components, such as rotor, frame or chassis, make these machines particularly attractive. Both models of the machine are available with wheeled and tracked drive.

An optional landfill undercarriage is available for unpaved ground.

Other features, designed to ensure comfort during turning, include the spacious mobile cabin with all-round 360-degree panoramic view. The ergonomic operating design includes air-cushioned driver's seat, integrated armrests on both sides, joystick and LED displays with touchscreen, making windrow turning a comfortable experience.

BACKHUS A 75

The **BACKHUS A 75** is the largest volume-produced turner in the world and enables the efficient composting of, for example, organic waste, green waste, sewage sludge, household waste or organic residues from palm oil or sugar cane production. Equally, the self-propelled windrow turner is also extremely capable for soil decontamination work and for the mixing of different substrates in the industrial sector. Hourly throughput rates of up to 7,000 m³ can be reached.

The integrated Eggersmann Management System (EMS) delivers optimum power for the machine. As a result, fuel savings of up to 15% are possible.

Like the other **BACKHUS** mobile turners, the largest model also has compact operating and transport dimensions. In addition to the high flexibility that results, and the corresponding ideal suitability to use across different operations, the impressive features of the **BACKHUS A 75** include a highly efficient footprint with possibly the best in class space utilisation.

For challenging space management - side conveyor

Concentrate injection unit to optimize the process

Professional rotting optimisation - BACKHUS fleece winder

Landfill track cleaver

Emission reduction - through enclosure

Process optimisation - irrigation during the turning process

Reliable traction on any surface - on track

Optional Wheel drive

Reliable traction on unpaved surfaces - the landfill version

Applications

For more than 30 years, product brands from Eggersmann have been used worldwide in various applications. In the process, we shred, screen, mix, separate and compost a wide variety of materials. The following is a small foretaste of the variety of applications for Eggersmann Recycling Technology.

We are happy to advise you if you want to dedicate yourself to a new application, optimise existing processes or go completely new ways. As we gain experience worldwide, there are almost no requirements that we have not already solved in this or a similar way.

Service & Spare Parts

Reliable · Fast · Worldwide

To ensure the long operating life and uptime of your Eggersmann machines, we are always on call as your expert service partner to support you. Our service advisers, technicians, mechanics, mechatronic engineers and programmers are at your service worldwide. So take advantage, today, of the experience of our service personnel and the expert support of our regional dealers.

Eggersmann service in detail:

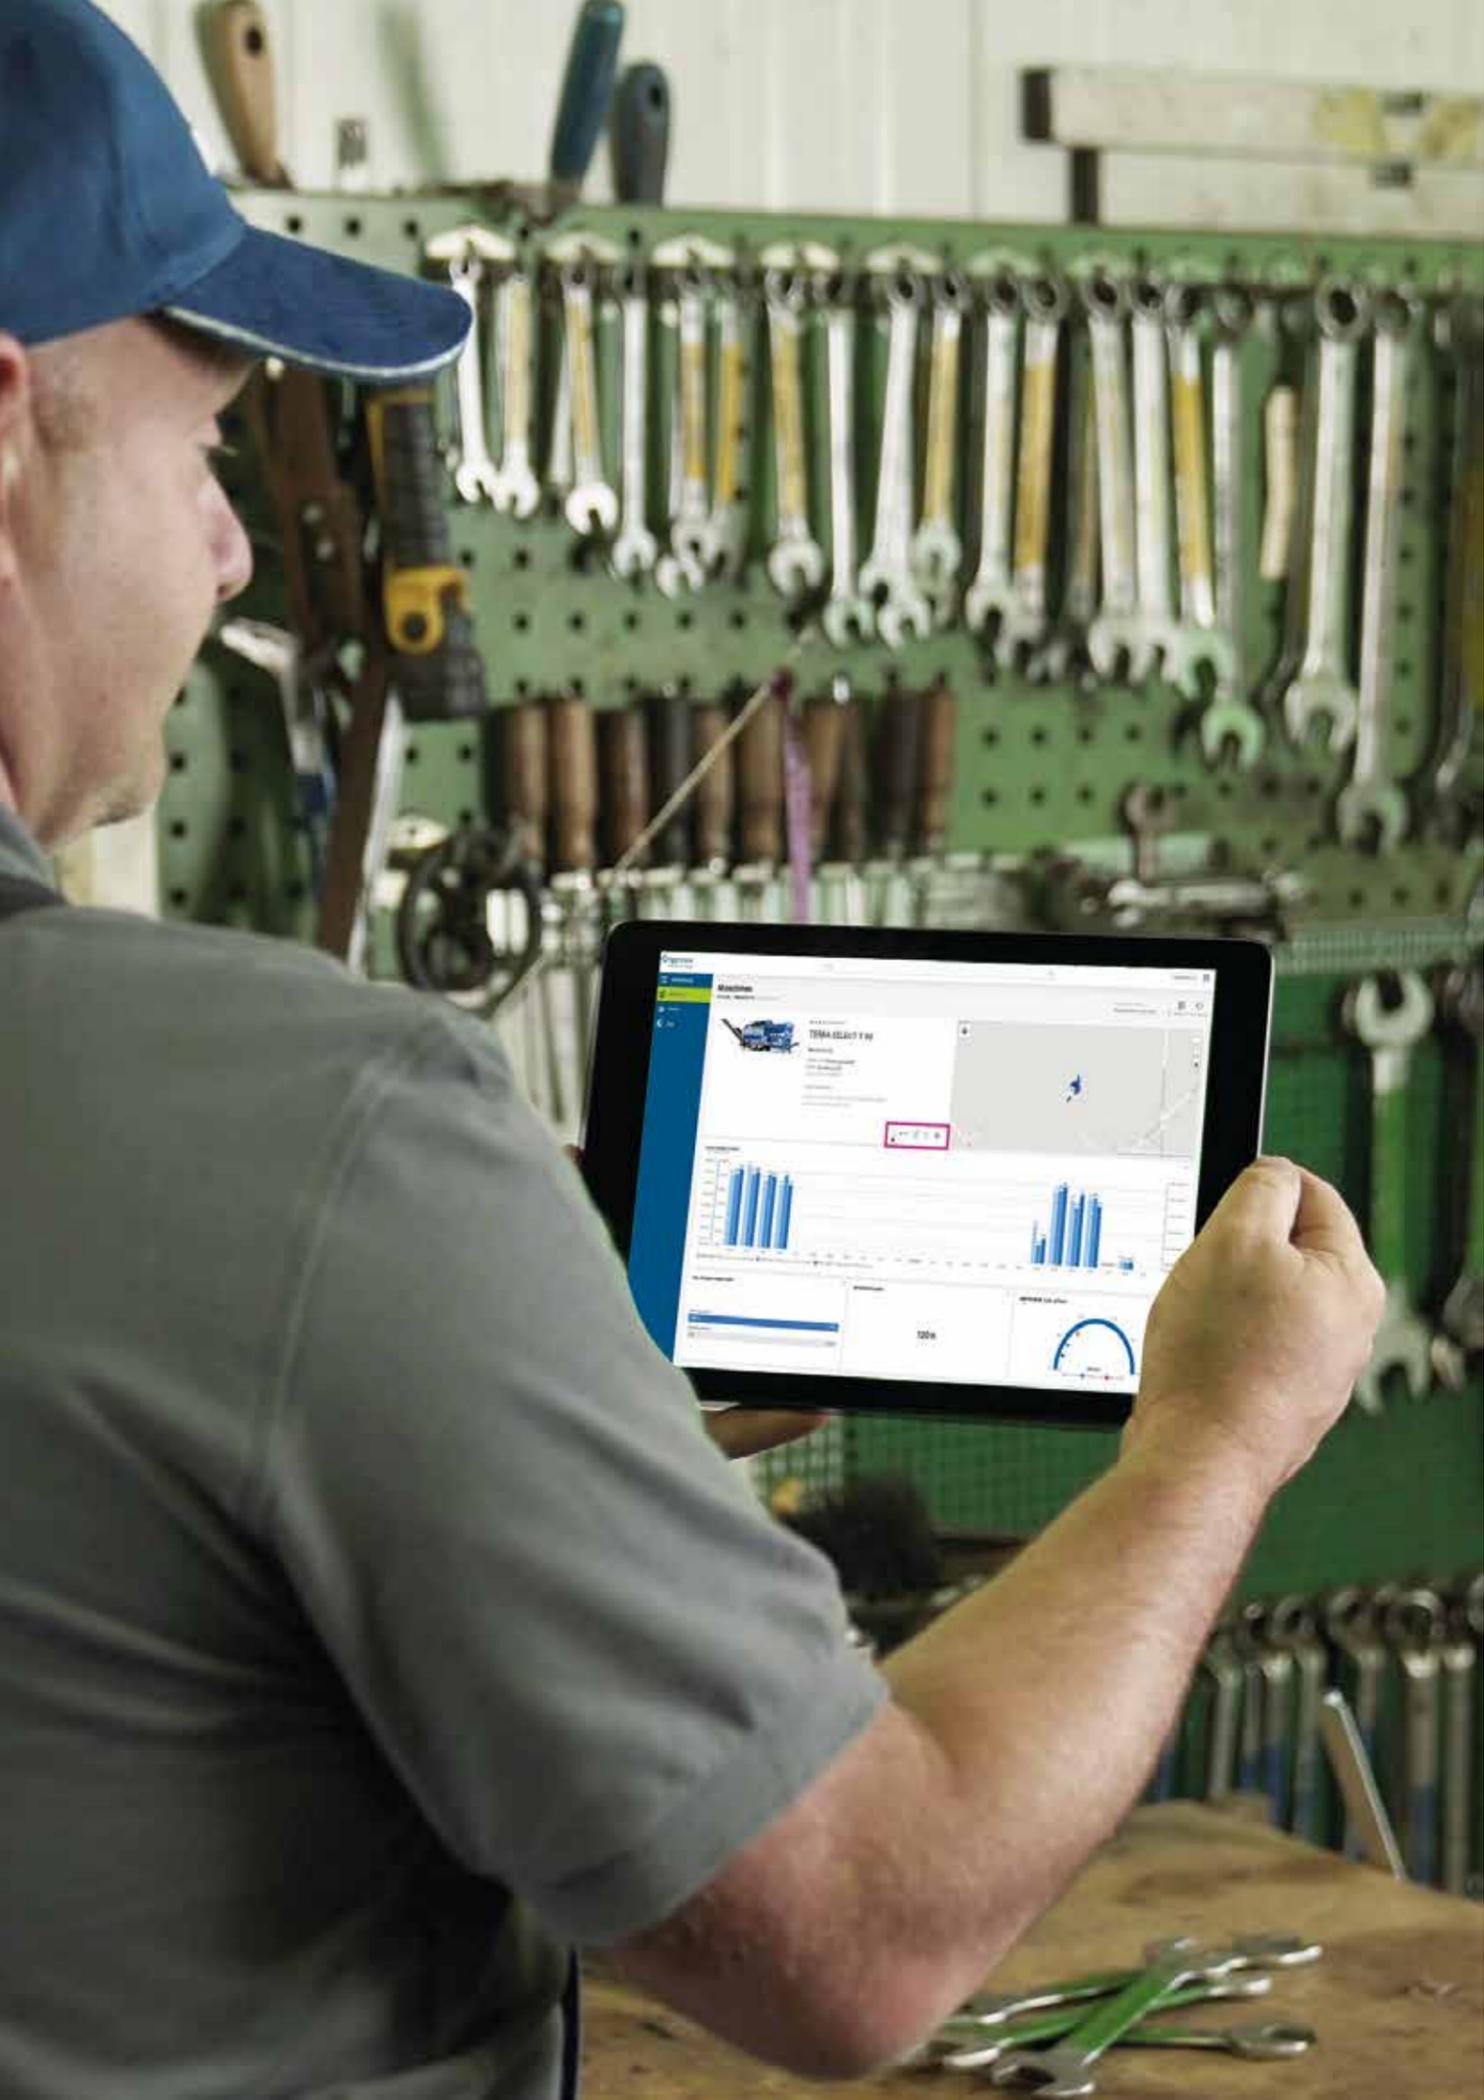

- › Commissioning, assembly & machine instruction
- › Preventive maintenance operations
- › Servicing
- › Troubleshooting
- › Modernisation and upgrading of machines
- › Professional advice

When your Eggersmann machine is inspected by our trained service staff, the complete basic set-up is checked for wear and tear, functionality and safety; essentially, the current condition of the machine is assessed. From this, you will receive a service checklist and a service report.

Advantages of regular Eggersmann service checks:

- › Extended operating life and uptime of the machine
- › Early warning system for wear: Early-stage, plannable troubleshooting leads to less machine downtime
- › Cost reduction through low repair costs
- › Comprehensive consultancy support

Eggersmann Telematic

Remote service and machine monitoring

A useful addition to the cost control and operational monitoring of your machines is the Eggersmann Telematic System.

It significantly simplifies maintenance and service operations. The machine sends the service partner the pending maintenance requirement or informs him directly in the event of a malfunction. The service partner has access to the relevant parameters and can make optimum preparations for the operation in both cases. Eggersmann will pay the costs for the first year of Eggersmann Telematic for you.

Telematic documents your success

Thanks to Eggersmann Telematic, work data, resource

consumption and the location of your machine can be called up and evaluated continuously via the Internet and PC, laptop or smartphone live or subsequently in the Eggersmann Telematic Portal.

The Eggersmann Telematic Tool is included as standard equipment in all of our machines.
